1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for Ondo on Scheduled Oracle Switch. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report was delivered privately to Ondo, who retain it as the full record of the engagement.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

4 Copyright and License

5 Audit Overview

Over the course of 3 days, the Cyfrin team conducted an audit on the Scheduled Oracle Switch code provided by Ondo. The findings consist of 3 Low severity issues with the remainder being informational.

Summary

Project Name	Scheduled Oracle Switch
Repository	rwa-internal
Commit	f09f7df97344...
Fix Commit	d1a557cfd9f0...
Audit Timeline	Oct 14th - Oct 16th, 2026
Methods	Manual Review

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	0	0	0
High Risk	0	0	0
Medium Risk	0	0	0
Low Risk	3	2	1
Informational	9	7	2
Gas Optimizations	0	0	0
Total	12	9	3

6 Audit Scope

The audit scope was limited to the following files:

```
contracts/rwaOracles/ScheduledOracleSwitch.sol
contracts/rwaOracles/ContinuousPriceOracle.sol
contracts/external/m0/ContinuousIndexingMath.sol
contracts/xManager/OndoOracle/USDYOracleWrapper.sol
contracts/xManager/OndoOracle/AbstractRWAOracleWrapper.sol
```

The code reviewed was from the private `rwa-internal` repository and the last mitigation commit we reviewed was d1a557cfd9f0ea97aa333626aff1baf1950f4698. We can confirm that the code from `rwa-internal` at this final mitigation commit is identical to the code at commit 5dc30d4f7cffe14e2d63c568b6850b6ce80240b2 in the public rwa-contracts repository.

7 Risk Classification

	Impact: High	**Impact: Medium**	**Impact: Low**
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

This addition to the Ondo system entails the migration of USDY's on-chain pricing from the Dynamic Rate Oracle to a new Continuous Price Oracle. The current oracle prices USDY in daily steps from rates that must be renewed every month. The new oracle accrues yield continuously from a single rate that stays in force until it is updated. A Scheduled Oracle Switch sits behind the existing USDY oracle wrappers to make the transition, moving every chain from the old oracle to the new one at the same predetermined moment.

The audit focused on the price staying continuous through the cutover, so that the handover between oracles causes no jump or exploitable discontinuity. It also covered the accuracy and safe operating range of the continuous compounding math, and whether the setter limits and role separation hold. Finally, it reviewed the trust assumptions of the cutover itself, which depends on off-chain configuration and on repointing the oracle wrappers.

9 Attestation

Cyfrin attests that it performed a security review of the Scheduled Oracle Switch code provided by Ondo.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2026-10-31-cyfrin-ondo-scheduled-oracle-switch-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to Ondo has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=27921de21ae8024bf769d366f2f2ca896bde64cbaaee7439a00b823aeca60c3c
F=2026-10-31-cyfrin-ondo-scheduled-oracle-switch-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
