1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for OkuMoney on OkuMoney. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

Technical details of individual findings are omitted from this public summary to limit disclosure of security-sensitive information. The complete audit report was delivered privately to OkuMoney, who retain it as the full record of the engagement. Recipients of the full report can use the SHA-256 hash in this summary's attestation to confirm that their copy matches the referenced report.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

4 Copyright and License

5 Audit Overview

Over the course of 10 days, the Cyfrin team conducted an audit on the OkuMoney code provided by OkuMoney. The findings consist of 2 Medium & 8 Low severity issues with the remainder being informational.

Summary

Project Name	OkuMoney
Repository	OkuMoneyContracts
Commit	90c7dc3ed011...
Fix Commit	1d6e86181278...
Audit Timeline	Oct 28th - Nov 10th, 2026
Methods	Manual Review, Proprietary AI

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	0	0	0
High Risk	0	0	0
Medium Risk	2	2	0
Low Risk	8	7	1
Informational	8	7	1
Gas Optimizations	0	0	0
Total	18	16	2

How to read the statuses

Resolved means Cyfrin verified the remediation documented in the full report with a Cyfrin verification note. Acknowledged means OkuMoney chose to retain the reported behavior or accept the residual risk; this does not constitute resolution or endorsement by Cyfrin. Finding-specific explanations and verification notes are recorded in the full report.

Risk Classification

	Impact: High	Impact: Medium	Impact: Low
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

6 Audit Scope

The audit scope was limited to the following files:

```
// EVM
EVM/src/lib/MathLib.sol
EVM/src/lib/OverrideBlockGuard.sol
EVM/src/lib/ReentrancyGuardUpgradeable.sol
EVM/src/psm/LitePSM.sol
EVM/src/token/OkuDollar.sol
EVM/src/token/OkuMoney.sol
EVM/src/token/OkuMoneyRateSchedule.sol

// Solana
SVM/oku-programs/crates/oku-shared/src/math.rs
SVM/oku-programs/crates/oku-shared/src/rate.rs
SVM/oku-programs/crates/oku-shared/src/wad.rs
SVM/oku-programs/crates/oku-shared/src/yield_lock.rs
SVM/oku-programs/programs/lite-psm/src/contexts/direct_burn.rs
SVM/oku-programs/programs/lite-psm/src/contexts/direct_mint.rs
SVM/oku-programs/programs/lite-psm/src/contexts/init.rs
SVM/oku-programs/programs/lite-psm/src/contexts/psm.rs
SVM/oku-programs/programs/lite-psm/src/contexts/psm_admin.rs
SVM/oku-programs/programs/lite-psm/src/contexts/yield_ops.rs
SVM/oku-programs/programs/lite-psm/src/helpers/display_sync.rs

SVM/oku-programs/programs/lite-psm/src/helpers/math.rs
SVM/oku-programs/programs/lite-psm/src/helpers/multiplier.rs
SVM/oku-programs/programs/lite-psm/src/helpers/yield_lock.rs
SVM/oku-programs/programs/lite-psm/src/instructions/direct_burn.rs
SVM/oku-programs/programs/lite-psm/src/instructions/direct_mint.rs
SVM/oku-programs/programs/lite-psm/src/instructions/init.rs
SVM/oku-programs/programs/lite-psm/src/instructions/psm.rs
SVM/oku-programs/programs/lite-psm/src/instructions/psm_admin.rs
SVM/oku-programs/programs/lite-psm/src/instructions/yield_ops.rs
SVM/oku-programs/programs/lite-psm/src/lib.rs
SVM/oku-programs/programs/lite-psm/src/state.rs
```

7 Protocol Summary

OkuMoney is centralized, multi-chain yield infrastructure backed by US Treasury Bills held off-chain. Users deposit supported reserve stablecoins through a Peg Stability Module (PSM) and receive OkuMoney (OkuM), a non-rebasing token whose dollar value increases with a shared multiplier. An authorized off-chain operator publishes a per-second compounding rate for a bounded time window; the rate remains fixed during that window while the canonical multiplier compounds continuously. The contracts do not prescribe the production yield policy: OkuMoney manages the reserve backing and Treasury Bill exposure off-chain and determines the rate published on-chain.

- **EVM token model:** OkuM can be wrapped into `OkuDollar` (usdOku), a rebasing, dollar-denominated representation whose displayed balance grows with the multiplier.
- **SVM token model:** A single OkuM Token-2022 mint uses the `ScaledUiAmount` extension for its yield-adjusted display. A permissionless crank periodically synchronizes the display multiplier with the canonical multiplier computed by the `lite-psm` program.
- **Peg Stability Modules:** `LitePSM` and `lite-psm` allow users to mint and redeem against a reserve buffer, using USDC or, on supported EVM chains, USDT.
- **Cross-chain transfers:** An off-chain orchestrator coordinates transfers across EVM chains and SVM. The bridge conserves dollar value, determines the destination token amount using the applicable destination multiplier, and does not accrue yield while a transfer is in flight.

8 Attestation

Cyfrin attests that it performed a security review of the OkuMoney code provided by OkuMoney.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2026-11-12-cyfrin-okumoney-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to OkuMoney has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=fe2653054e32f29d043d19afb1c95a5eab366490cf01ebb71cce0e51922099f9
F=2026-11-12-cyfrin-okumoney-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
