1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for LinkPool on LiquidSDIndexPool. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated March 10, 2023, was delivered to LinkPool, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

4 Copyright and License

5 Audit Overview

Over the course of 10 days, the Cyfrin team conducted an audit on the LiquidSDIndexPool code provided by LinkPool. The findings consist of 2 High, 5 Medium & 10 Low severity issues with the remainder being informational and gas optimizations.

Summary

Project Name	LinkPool LiquidSDIndexPool
Repository	staking-contracts-v2
Commit	7084a329a6a4...
Fix Commit	c0877e0c59b7...
Audit Timeline	Feb 6th - Feb 17th, 2023

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	n/a	0	0
High Risk	2	2	0
Medium Risk	5	3	2
Low Risk	10	7	3
Informational	9	1	8
Gas Optimizations	12	0	12
Total	38	13	25

Informational / Non-Critical findings are counted as Informational, and findings the report marks Closed as resolved. The report's status table lists no Gas findings; they are shown as acknowledged, as its resolution notes record.

6 Audit Scope

The contracts in the `contracts/liquidSDIndex/` folder of LinkPool's staking-contracts-v2 repository, at commit `7084a32`.

The test folder and the test contracts in the `liquidSDIndex` folder were out of scope.

The fixes were reviewed at commit `c0877e0`.

7 Risk Classification

This report used the following severity criteria.

- **High:** Assets can be stolen, lost or compromised directly (or indirectly if there is a valid attack path that does not have hand-wavy hypotheticals).
- **Medium:** Assets not at direct risk, but the function of the protocol or its availability could be impacted, or leak value with a hypothetical attack path with stated assumptions, but external requirements.
- **Low:** Low impact and low or medium likelihood events where assets are not at risk (or a trivial amount of assets are), state handling might be off, functions are incorrect as to NatSpec, issues with comments, etc.
- **Informational** / **Non-Critical:** A non-security issue, like a suggested code improvement, a comment, a renamed variable, etc.
- **Gas:** Gas saving and performance suggestions.

8 Protocol Summary

The LinkPool LiquidSDIndexPool protocol allows users to deposit liquid staking derivative tokens (LSDs) such as Rocket Pool ETH (rETH) and Lido ETH (stETH) and, in return, receive a token that represents a holding in a basket of these assets. The protocol takes a fee on withdrawals.

The product intends to provide exposure to ETH staking by averaging the rate of interest across multiple staked ETH derivative protocols.

9 Attestation

Cyfrin attests that it performed a security review of the LiquidSDIndexPool code provided by LinkPool.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2023-03-07-linkpool_liquid_sd_index_pool.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to LinkPool has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=7820d952f9d9a4fe096d0c8ad0cb8ef4fe346d7868cd0a1b98fd67a650e55b52
F=2023-03-07-linkpool_liquid_sd_index_pool-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
