1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for Sudoswap on sudoAMM v2. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated June 1, 2023, was delivered to Sudoswap, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

4 Copyright and License

5 Audit Overview

Over the course of 15 days, the Cyfrin team conducted an audit on the sudoAMM v2 code provided by Sudoswap. The findings consist of 3 High, 4 Medium & 3 Low severity issues with the remainder being informational and gas optimizations.

Summary

Project Name	Sudoswap
Repository	sudoswap-lssvm2
Commit	78d38753b204...
Audit Timeline	Apr 5, 2023 - Apr 26, 2023
Methods	Manual Review, Stateful Fuzzing

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	0	0	0
High Risk	3	0	3
Medium Risk	4	2	2
Low Risk	3	0	3
Informational	6	3	3
Gas Optimizations	4	–	–
Total	20	–	–

Statuses follow each finding's final Cyfrin response. The report records no status for its Gas Optimizations.

6 Audit Scope

The Sudoswap sudoAMM v2 smart contracts in the lssvm2 repository, at commit `78d38753b204`.

7 Risk Classification

	Impact: High	**Impact: Medium**	**Impact: Low**
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

Sudoswap sudoAMM v2 delivers several specific feature upgrades missing from sudoAMM v1, an implementation of the AMM protocol described here.

Additional features include on-chain royalty support, property-checking, revenue sharing, ERC-1155 support and a new unified router.

9 Attestation

Cyfrin attests that it performed a security review of the sudoAMM v2 code provided by Sudoswap.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at `https://github.com/Cyfrin/cyfrin-audit-reports`. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2023-06-01-sudoswap-report.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to Sudoswap has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=70a7ac87332362be359d7c34274f6abb1c7139a972acc37016ba5a969d46675d
F=2023-06-01-sudoswap-report-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
