1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for MODE on EARN'M. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated December 14, 2023, was delivered to MODE, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

4 Copyright and License

5 Audit Overview

Over the course of 5 days, the Cyfrin team conducted an audit on the EARN'M code provided by MODE. The findings consist of 2 Critical, 3 High, 2 Medium & 1 Low severity issues with the remainder being informational and gas optimizations.

Summary

Project Name	EARN'M
Repository	smart-contracts
Commit	43d3a8305dd6...
Audit Timeline	Nov 13th - Nov 17th, 2023
Methods	Manual Review

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	2	2	0
High Risk	3	3	0
Medium Risk	2	1	1
Low Risk	1	1	0
Informational	4	2	2
Gas Optimizations	8	8	0
Total	20	17	3

6 Audit Scope

The following contracts were included in the scope for this audit:

```
contracts/EARNM.sol
contracts/MysteryBox.sol
```

7 Risk Classification

	Impact: High	Impact: Medium	Impact: Low
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

EARN'M is a rewards program where users receive reward codes which they can use to claim mystery boxes of varying tiers. The probability of receiving lower-tier boxes is relatively high, while the chances of obtaining higher-tier, more valuable boxes are significantly lower. Users are eligible to claim their boxes after a set vesting period, receiving a predetermined amount of EARN'M tokens corresponding to their box's tier. An early claim option is also available but it comes with a penalty: a reduction in the reward tokens received. Box tiers are allocated using randomness from Chainlink VRF.

9 Attestation

Cyfrin attests that it performed a security review of the EARN'M code provided by MODE.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2023-11-20-cyfrin-mode-earnm-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to MODE has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=a1ed21ca9d815e479bf2696a0b0898d349f2f236571d1d27265ee664846872f2
F=2023-11-20-cyfrin-mode-earnm-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
