1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for Tunnl on Tunnl. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated July 1, 2024, was delivered to Tunnl, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

4 Copyright and License

5 Audit Overview

Over the course of 7 days, the Cyfrin team conducted an audit on the Tunnl code provided by Tunnl. The findings consist of 1 Critical & 5 Medium severity issues with the remainder being informational.

Summary

Project Name	Tunnl
Repository	Tunnl-Contracts
Commit	685cd12d70d9...
Audit Timeline	June 17th - June 25th, 2024
Methods	Manual Review

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	1	1	0
High Risk	0	0	0
Medium Risk	5	2	3
Low Risk	0	0	0
Informational	3	3	0
Gas Optimizations	0	0	0
Total	9	6	3

6 Audit Scope

A single Solidity file `TunnlTwitterOffers.sol` is in scope for this audit.

7 Risk Classification

	Impact: High	Impact: Medium	Impact: Low
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

The `TunnlTwitterOffers` contract is a decentralized on-chain marketing platform where brands (advertisers) submit offers and Twitter creators accept them. The contract uses Chainlink Functions and Automation to manage offers, escrow funds, verify Twitter content, and handle payouts.

The funds from the advertiser are held in escrow until the Twitter content is verified by AI. Escrowed funds are only released to the creator after the content is successfully verified and has been live for a sufficient duration.

Key features:

- **Offer creation and acceptance:** advertisers make offers, and creators can accept them. Once accepted, the funds are locked in escrow.
- **Automated verification:** Chainlink Functions are used to check Twitter content, giving a Yes or No response.
- **Payouts:** after successful verification, funds are released to creators once the offer duration has passed and the content is still live.
- **Fees:** an advertiser percentage fee is added to the offer value, and a creator percentage fee is taken from the amount paid to the creator.

9 Attestation

Cyfrin attests that it performed a security review of the Tunnl code provided by Tunnl.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2024-07-01-cyfrin-tunnl-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to Tunnl has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=449706d11b12a8686d614b29d0632ea0d2952bef434ea09eb18e8df15344f0b4
F=2024-07-01-cyfrin-tunnl-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
