1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for CASIMIR LABS on CASIMIR SELF-STAKE. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated July 10, 2024, was delivered to CASIMIR LABS, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

4 Copyright and License

5 Audit Overview

Over the course of 19 days, the Cyfrin team conducted an audit on the CASIMIR SELFSTAKE code provided by CASIMIR LABS. The findings consist of 6 Critical, 6 High, 5 Medium & 5 Low severity issues with the remainder being informational.

Summary

Project Name	CASIMIR SELFSTAKE
Repository	casimir-contracts
Commit	486c2b23113c...
Audit Timeline	Apr 23 - May 17th, 2024
Methods	Manual Review, Stateful Fuzzing

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	6	6	0
High Risk	6	6	0
Medium Risk	5	4	1
Low Risk	5	5	0
Informational	5	5	0
Gas Optimizations	0	0	0
Total	27	26	1

6 Audit Scope

Audit scope was limited to the Solidity contracts that govern the core on-chain operations of Casimir.

The following contracts were included in the scope of the audit

```
src/CasimirFactory.sol
src/CasimirManager.sol
src/CasimirRegistry.sol
src/libraries/Arrays.sol
src/libraries/Proxies.sol
src/interfaces/ICasimirCore.sol
src/interfaces/ICasimirFactory.sol
src/interfaces/ICasimirManager.sol
src/interfaces/ICasimirRegistry.sol
```

7 Risk Classification

	Impact: High	**Impact: Medium**	**Impact: Low**
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

Casimir is a non-custodial Ethereum restaking platform built on EigenLayer's infrastructure, using Distributed Validator Technology (DVT).

Key features:

- **Validator management:** validators on Casimir are openly registered, collateralized operators utilizing Distributed Validator Technology (DVT).
- **Key management:** keys are managed through a zero-coordination distributed key generation (DKG) process.
- **Restaking:** Casimir uses the EigenLayer infrastructure for restaking, allowing stakers to deposit ETH directly to selected Ethereum operators without the issuance of a Liquid Restaking Token.
- **Withdrawals:** the platform supports full withdrawals.

Casimir's architecture is built around three core smart contracts:

- **CasimirFactory:** registers staking strategies, each specifying parameters such as the size of the operator cluster, the minimum collateral required from operators and the reward fee.
- **CasimirRegistry:** deployed for each strategy, it manages the registration, removal, and resharing of operators.
- **CasimirManager:** deployed for each strategy, it handles user interactions such as staking and unstaking.

9 Attestation

Cyfrin attests that it performed a security review of the CASIMIR SELFSTAKE code provided by CASIMIR LABS.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2024-07-10-cyfrin-casimir-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to CASIMIR LABS has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=d3be4b3e420523c40362e4559a6c19219c7738eeaa6788e08630fda2116487b9
F=2024-07-10-cyfrin-casimir-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
