1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for Chaos Labs on Risk Oracle. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated September 9, 2024, was delivered to Chaos Labs, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

4 Copyright and License

5 Audit Overview

Over the course of 6 days, the Cyfrin team conducted an audit on the Risk Oracle code provided by Chaos Labs. The findings consist of 1 Medium severity issue with the remainder being informational and gas optimizations.

Summary

Project Name	Risk Oracle
Repository	risk-oracle
Commit	9449219174e3...
Audit Timeline	Aug 14th - Aug 21st, 2024
Methods	Manual Review, Stateful Fuzzing

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	0	0	0
High Risk	0	0	0
Medium Risk	1	1	0
Low Risk	0	0	0
Informational	5	4	1
Gas Optimizations	2	2	0
Total	8	7	1

6 Audit Scope

Cyfrin conducted an audit of the Chaos Labs Risk Oracle smart contract based on the code present in the repository commit hash 9449219.

The RiskOracle.sol contract and its dependencies were included in the scope of the audit.

7 Risk Classification

	Impact: High	**Impact: Medium**	**Impact: Low**
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

Chaos Labs' platform revolutionizes on-chain risk management, security, and incentive strategies by automating real-time protocol parameter recommendations, utilizing sophisticated data analytics, modeling, and simulations.

Chaos Labs operate an off-chain Risk Engine – when it identifies a new recommendation, this will be written directly to the Risk Oracle smart contract for consumption by integrating protocols.

9 Attestation

Cyfrin attests that it performed a security review of the Risk Oracle code provided by Chaos Labs.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2024-08-21-cyfrin-chaos-labs-risk-oracle-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to Chaos Labs has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=f59f0be424db01730b0900ea3c2874bcc0f26e6c8414a6f0b8be20d199841428
F=2024-08-21-cyfrin-chaos-labs-risk-oracle-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
