1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for One World Project on One World Project. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated October 29, 2024, was delivered to One World Project, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

5 Audit Overview

Over the course of 7 days, the Cyfrin team conducted an audit on the One World Project code provided by One World Project. The findings consist of 2 Critical, 2 High, 8 Medium & 5 Low severity issues with the remainder being informational and gas optimizations.

Summary

Project Name	One World Project
Repository	smart-contracts-blockchain-1wp
Commit	416630e46ea6...
Audit Timeline	Oct 7th - Oct 15th, 2024
Methods	Manual Review

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	2	2	0
High Risk	2	0	2
Medium Risk	8	3	5
Low Risk	5	4	1
Informational	20	12	8
Gas Optimizations	1	1	0
Total	38	22	16

6 Audit Scope

Cyfrin conducted an audit of One World Project based on the code present in the repository commit hash `416630e`.

The following contracts were included in the scope of the audit:

```
dao/libraries/MembershipDAOStructs.sol
dao/tokens/MembershipERC1155.sol
dao/CurrencyManager.sol
dao/MembershipFactory.sol
meta-transaction/EIP712Base.sol
meta-transaction/NativeMetaTransaction.sol
OWPIdentity.sol
```

7 Risk Classification

	Impact: High	Impact: Medium	Impact: Low
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

The One World Project is a protocol that enables user identification and profit sharing for DAOs. Each DAO issues ERC1155 tokens representing its membership tiers. Users can join by paying a fee and earn a share of the profits, with their earnings proportional to their membership tier.

Key components:

1. **MembershipFactory:** the entry-point contract for users wanting to either create a DAO membership token or join an existing one.
2. **MembershipERC1155:** an ERC1155 token created by a DAO to manage tiered profit sharing.
3. **OWPIdentity:** a non-transferable token that identifies a user within the One World Project ecosystem.

MembershipFactory flow:

1. **Registering a DAO:** a DAO creates a membership token with One World Project, providing information such as name, type, maximum members, payment token, and tier configuration.
2. **Joining a DAO:** users can join the DAO by paying the configured price for their selected tier as long as the total amount of tokens at that tier is not exceeded.
3. **Distributing profit:** profit is sent to the membership token contract and distributed according to shares, proportional to the membership tier.
4. **Upgrading membership:** a user can upgrade their tier if the DAO is of type SPONSORED.

9 Attestation

Cyfrin attests that it performed a security review of the One World Project code provided by One World Project.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2024-10-29-cyfrin-one-world-project-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to One World Project has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=af8f10d5ae861e26b8291b08e90ef5a1d3ee8ddd789094f0fd9a5578f73c17d7
F=2024-10-29-cyfrin-one-world-project-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
