1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for Securitize on Securitize. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated December 17, 2024, was delivered to Securitize, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

5 Audit Overview

Over the course of 10 days, the Cyfrin team conducted an audit on the Securitize code provided by Securitize. The findings consist of 1 Critical, 3 Medium & 5 Low severity issues with the remainder being informational.

Summary

Project Name	Securitize
Repository	bc-redemption-sc
Commit	3977ca8ffb25...
Fix Commit	8254e84a8bd2...
Repository 2	securitize-swap
Commit	c58f74611a97...
Fix Commit	8254e84a8bd2...
Repository 3	bc-securitize-vault-sc
Commit	5ddd6f995c94...
Fix Commit	8254e84a8bd2...
Repository 4	bc-nav-provider-sc
Commit	f86f85cf520a...
Fix Commit	8254e84a8bd2...
Audit Timeline	Dec 3rd - Dec 16th, 2024
Methods	Manual Review, Stateful Fuzzing

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	1	1	0
High Risk	0	0	0
Medium Risk	3	3	0
Low Risk	5	4	1
Informational	4	4	0
Gas Optimizations	0	0	0
Total	13	12	1

6 Audit Scope

- **securitize_dev-bc-nav-provider:** all Solidity contracts in the `contracts` directory.
- **securitize_dev-bc-redemption:** all Solidity contracts in the `contracts` directory except the `mocks`.
- **securitize_dev-bc-securitize-vault:** all Solidity contracts in the `contracts` directory except the `mocks`.
- **securitize_dev-securitize-swap:** all Solidity contracts in the `contracts` directory except the `mocks` and `non-auditable`.

7 Risk Classification

	Impact: High	**Impact: Medium**	**Impact: Low**
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

The audited part of the Securitize system consists of four components: the NAV Provider, the Redemption contract, the Swap contract, and the Vault contract. These components work together to allow investors to convert digital security tokens into stable tokens and vice versa.

- **Securitize NAV Provider:** defines a common interface (`ISecuritizeNavProvider`) to get the current NAV rate for redeem, swap and liquidation operations involving DSToken and stable coins. The rate is the number of stable coins that can be exchanged for one DSToken.
- **Securitize Redemption Protocol:** allows investors to redeem their digital securities for stable coins. It supports two types of liquidity providers for supplying stable coins: `AllowanceLiquidityProvider`, where a provider wallet supplies stable coins directly, and `CollateralLiquidityProvider`, which interacts with an external collateral redemption contract.
- **Securitize Swap Contract:** investors can swap their ERC20 tokens for stable coins, in one of two modes: `ExternalCollateralRedemption` and `DirectStableCoin`.
- **Securitize Vault Contract:** an ERC4626-compliant tokenized vault with asset deposit and redemption, liquidation, and NAV-based share price calculation.

9 Attestation

Cyfrin attests that it performed a security review of the Securitize code provided by Securitize.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2024-12-17-cyfrin-securitize-redeem-swap-vault-nav-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to Securitize has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=a50332210d2e71f679e9a303f4e0a8d9d1edb24a242f963f4563951002fdf56b
F=2024-12-17-cyfrin-securitize-redeem-swap-vault-nav-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
