1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for Rocko on Rocko Flash Refinance. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated March 28, 2025, was delivered to Rocko, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

5 Audit Overview

Over the course of 5 days, the Cyfrin team conducted an audit on the Rocko Flash Refinance code provided by Rocko. The findings consist of 2 Low severity issues with the remainder being informational and gas optimizations.

Summary

Project Name	Rocko Flash Refinance
Repository	onchain
Commit	911c3a6ef976...
Audit Timeline	Mar 17th - Mar 21st, 2025
Methods	Manual Review, Fork Fuzz Testing

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	0	0	0
High Risk	0	0	0
Medium Risk	0	0	0
Low Risk	2	2	0
Informational	8	7	1
Gas Optimizations	9	9	0
Total	19	18	1

6 Audit Scope

The only contract in scope is:

```
packages/hardhat/contracts/RockoFlashRefinance.sol
```

7 Risk Classification

	Impact: High	**Impact: Medium**	**Impact: Low**
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

Rocko is a protocol which aims to simplify the DeFi lending user experience by:

- collating a multitude of DeFi loan offers
- allowing users to easily choose the best or most attractive loan offers

The new "Flash Refinance" component aims to make refinancing of existing loans easy and seamless for users by handling all third-party protocol interactions using the new `RockoFlashRefinance.sol` smart contract. Instead of users previously having to interact with multiple different third-party protocol-specific smart contracts, users can now complete the entire refinance in one transaction by interacting with Rocko's new smart contract. The result is instant refinancing, lower gas costs and a smoother, frictionless user experience.

The `RockoFlashRefinance` smart contract moves a user's position from one third-party lending protocol to another in a single transaction and integrates with 3 protocols: Aave, Compound & Morpho.

9 Attestation

Cyfrin attests that it performed a security review of the Rocko Flash Refinance code provided by Rocko.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2025-03-28-cyfrin-rocko-refinance-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to Rocko has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=0e2b653d0962597522b42e69b7f015bb13082fa590857c57651bf0f1395e9510
F=2025-03-28-cyfrin-rocko-refinance-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
