1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for Euler on EulerSwap. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.1 dated June 6, 2025, was delivered to Euler, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

5 Audit Overview

Over the course of 2 days, the Cyfrin team conducted an audit on the EulerSwap code provided by Euler. The findings consist of 2 Low severity issues with the remainder being informational and gas optimizations.

Summary

Project Name	EulerSwap
Repository	euler-swap
Commit	1022c0bb3c03...
Audit Timeline	May 5th - May 9th, 2025
Methods	Manual Review

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	0	0	0
High Risk	0	0	0
Medium Risk	0	0	0
Low Risk	2	0	2
Informational	3	2	1
Gas Optimizations	2	0	2
Total	7	2	5

6 Audit Scope

```
EulerSwap.sol
EulerSwapFactory.sol
EulerSwapPeriphery.sol
UniswapHook.sol
CtxLib.sol
CurveLib.sol
FundsLib.sol
QuoteLib.sol
MetaProxyDeployer.sol
ProtocolFee.sol
```

An additional commit, c1c375f, was reviewed after the conclusion of the engagement, and PR #99 was reviewed after the protocol went live.

7 Risk Classification

	Impact: High	Impact: Medium	Impact: Low
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

EulerSwap is an AMM design developed by the Euler team. It allows users of Euler vaults to use their vault positions as liquidity for the EulerSwap AMM. The AMM supports a customizable curve that can behave like either a constant product or a constant sum AMM. Each deployed instance functions both as a standalone Uniswap V2-style AMM and as a hook compatible with Uniswap V4.

8.1 Key Components

- `EulerSwapFactory`**:** A factory that deploys `EulerSwap` AMM instances for Euler vault holders, each operating on the holder's vault with a chosen curve configuration.
- `EulerSwap`**:** The AMM instance. Trades using a customizable curve and liquidity sourced from Euler vaults. Supports borrowing, depositing, and withdrawing from the vault. Operates both as a standalone Uniswap V2-style AMM and as a Uniswap V4 hook with a custom curve.

9 Attestation

Cyfrin attests that it performed a security review of the EulerSwap code provided by Euler.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2025-06-06-cyfrin-eulerswap-v2.1.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to Euler has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=a397380fec1a68b567b8e4a9179f8613e9e44008f6d463e2d0dca34856bc539a
F=2025-06-06-cyfrin-eulerswap-v2.1-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
