1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for Belobaba on Doryoku. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated July 22, 2025, was delivered to Belobaba, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

4 Copyright and License

5 Audit Overview

Over the course of 3 days, the Cyfrin team conducted an audit on the Doryoku code provided by Belobaba. The findings consist of 2 High & 4 Low severity issues with the remainder being informational.

Summary

Project Name	Doryoku
Repository	xbelo
Commit	7601b7bc4c05...
Repository 2	belo_clmm_lp_farming
Commit	f37639cd7586...
Audit Timeline	Jul 4th - Jul 8th, 2025
Methods	Manual Review

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	0	0	0
High Risk	2	2	0
Medium Risk	0	0	0
Low Risk	4	4	0
Informational	11	11	0
Gas Optimizations	0	0	0
Total	17	17	0

6 Audit Scope

Cyfrin conducted an audit of the xBELO and BELO CLMM LP Farming programs based on the code present at commit hashes f37639c and 7601b7b with scope:

```
belo_lp_farming/programs/clmm_lp_farming/src/lib.rs
xbelo/programs/xbelo/src/lib.rs
```

7 Risk Classification

	Impact: High	**Impact: Medium**	**Impact: Low**
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

The xBELO program converts liquid BELO into a frozen receipt token that cannot be transferred. Users deposit BELO into a vault owned by the program's state PDA, receive an equal amount of xBELO, and later choose a vesting period that burns a percentage immediately while locking the remainder until maturity. Once the lock ends, the user retrieves the vested portion from the vault and the program burns the remainder.

The CLMM LP Farming program allows liquidity providers to lock Raydium concentrated-liquidity NFTs for fixed terms of one, three, six, or twelve months. Each position is transferred into a program-owned vault account and later returned to the user when the term ends, while off-chain logic tallies staking rewards from emitted events.

9 Attestation

Cyfrin attests that it performed a security review of the Doryoku code provided by Belobaba.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2025-07-22-cyfrin-doryoku-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to Belobaba has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=919f65b0c3725dcdcd7ea82b0eb125601fc1827034c6c5d8b5f00d510a5c5b7d
F=2025-07-22-cyfrin-doryoku-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
