1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for STBL on STBL. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated September 10, 2025, was delivered to STBL, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

4 Copyright and License

5 Audit Overview

Over the course of 10 days, the Cyfrin team conducted an audit on the STBL code provided by STBL. The findings consist of 4 Medium & 7 Low severity issues with the remainder being informational and gas optimizations.

Summary

Project Name	STBL
Repository	contract
Commit	568c9211c9c1...
Audit Timeline	Aug 19th - Sep 1st, 2025
Methods	Manual Review

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	0	0	0
High Risk	0	0	0
Medium Risk	4	3	1
Low Risk	7	7	0
Informational	6	4	2
Gas Optimizations	1	1	0
Total	18	15	3

6 Audit Scope

The following contracts were in scope for this audit:

```
STBL_OracleLib.sol
STBL_LT1_Issuer.sol
STBL_LT1_Oracle.sol
STBL_LT1_Vault.sol
STBL_LT1_YieldDistributor.sol
STBL_PT1_Issuer.sol
STBL_PT1_Oracle.sol
STBL_PT1_Vault.sol
STBL_PT1_YieldDistributor.sol
STBL_Core.sol
STBL_Register.sol
STBL_AssetDefinitionLib.sol
STBL_DecimalConverter.sol
STBL_Decoder.sol
STBL_MetadataLib.sol
STBL_Token.sol
STBL_USST.sol
STBL_YLD.sol
Lock.sol
```

7 Risk Classification

	Impact: High	**Impact: Medium**	**Impact: Low**
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

STBL Protocol is a yield-bearing stablecoin platform that tokenizes Real World Assets (RWAs) through a dual-token architecture. The protocol enables users to deposit yield-bearing assets like USDY (Ondo's yield-bearing USD) and OUSG (Ondo Short-Term US Government Bond Token) and receive fungible stablecoin tokens alongside yield-bearing NFTs.

The protocol supports two distinct asset categories:

- **PT1 assets (Principal Token - Type 1):** designed for assets like USDY that appreciate through rebasing or compound interest; yield comes from asset price appreciation over time. Examples: USDY_PT1, OUSG_-PT1.
- **LT1 assets (Liquidity Token - Type 1):** designed for assets with more complex yield mechanisms; yield distribution is similar but the internal mechanics differ. Examples: USDY_LT1, OUSG_LT1.

9 Attestation

Cyfrin attests that it performed a security review of the STBL code provided by STBL.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2025-09-05-cyfrin-stbl-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to STBL has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=9c8cd8c83de5a9fbcd062c6e2380620cbbfd16d162bf1e29ff2c5af6b332f8dd
F=2025-09-05-cyfrin-stbl-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
