1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for WannaBet on WannaBetV2. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated December 24, 2025, was delivered to WannaBet, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

5 Audit Overview

Over the course of 2 days, the Cyfrin team conducted an audit on the WannaBetV2 code provided by WannaBet. The findings consist of 3 Medium & 4 Low severity issues with the remainder being informational and gas optimizations.

Summary

Project Name	WannaBetV2
Repository	wannabet-v2
Commit	d73333695488...
Fix Commit	c18aae04ef57...
Audit Timeline	Nov 27th - Nov 28th, 2025
Methods	Manual Review

Issues Found

Severity	Found	Resolved	Acknowledged
Critical Risk	0	0	0
High Risk	0	0	0
Medium Risk	3	3	0
Low Risk	4	2	2
Informational	11	10	1
Gas Optimizations	5	4	1
Total	23	19	4

6 Audit Scope

The audit scope was limited to:

```
contracts/src/Bet.sol
contracts/src/BetFactory.sol
```

7 Risk Classification

	Impact: High	Impact: Medium	Impact: Low
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

WannaBet is a peer-to-peer wagering system that enables two parties (`maker` and `taker`) to create and participate in bets with third-party adjudication by a nominated `judge`. The protocol consists of two primary contracts:

- `BetFactory` deploys individual bet instances using the minimal clone pattern (EIP-1167)
- `Bet` implementation contract that manages the lifecycle and funds for each wager

A bet is initiated when a `maker` specifies a designated `taker`, a `judge`, the wagering asset, stake amounts for both parties, and deadline parameters. The `maker`'s stake is transferred upon bet creation, after which the `taker` has until the `acceptBy` timestamp to accept by depositing their stake. Once both parties have committed funds, the bet becomes active and awaits resolution by the designated `judge`, who must declare a winner before the `resolveBy` deadline. If either deadline passes without the required action, the bet expires and can be cancelled, returning funds to their respective depositors.

The protocol integrates with Aave V3 to generate yield on deposited funds while bets await resolution; when an Aave pool is configured for the wagered token, bet contracts automatically supply deposited assets to Aave. Upon resolution the winner receives the combined stakes, while any accrued yield is directed to the protocol treasury. This design:

- allows participants' funds to remain productive rather than sitting idle during the betting period
- provides the betting service at no cost to the participants
- provides an income stream for the protocol from the generated yield

9 Attestation

Cyfrin attests that it performed a security review of the WannaBetV2 code provided by WannaBet.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2025-12-24-cyfrin-wannabetv2-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to WannaBet has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=ca0ed1a59ecafc0829dabb69a088d8ab1fbea189c6aa1d65fd8a366848d05892
F=2025-12-24-cyfrin-wannabetv2-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
