1 About Cyfrin

Cyfrin is a Web3 security company dedicated to bringing industry-leading protection and education to our partners and their projects. Our goal is to create a safe, reliable, and transparent environment for everyone in Web3 and DeFi. Learn more about us at cyfrin.io.

2 About This Document

This document is a public summary of the security audit Cyfrin performed for Securitize on DSToken Timelocks. It records the repositories and commits reviewed, the timeline, auditors, in-scope files, and the number and final status of findings by severity. It closes with Cyfrin's attestation of the review's scope and final remediation status.

It is deliberately abbreviated: the technical detail of individual findings is not reproduced here. The complete audit report, version 2.0 dated September 7, 2026, was delivered to Securitize, who retain it as the full record of the engagement. This summary was issued on October 29, 2026.

3 Disclaimer

The Cyfrin team makes every effort to find as many vulnerabilities in the code as possible in the given time but holds no responsibility for the findings in this document. A security audit by the team does not endorse the underlying business or product. The audit was time-boxed and the review of the code was solely on the security aspects of the in-scope code being audited. Unless the scope explicitly notes otherwise, the review is limited to the application layer and does not extend to the correctness of API/SDK/execution environment implementations, compilers, standard and third-party libraries, underlying operating systems and hardware.

5 Audit Overview

Over the course of 3 days, the Cyfrin team conducted an audit on the DSToken Timelocks code provided by Securitize. The findings consist of 3 Low severity issues with the remainder being informational.

Summary

Project Name	DSToken Timelocks
Repository	dstoken
Commit	fa69a365c0ff...
Fix Commit	f463659abfd0...
Audit Timeline	Aug 26th - Aug 28th, 2026
Methods	Manual Review

Issues Found

Severity	Found	Resolved	Partially Resolved	Acknowledged
Critical Risk	0	0	0	0
High Risk	0	0	0	0
Medium Risk	0	0	0	0
Low Risk	3	3	0	0
Informational	12	8	1	3
Gas Optimizations	0	0	0	0
Total	15	11	1	3

6 Audit Scope

The audit scope was limited to the changes for BC-2132 (mint throttle and over-cap timelock) and BC-2133 (governance timelocks) in the diff between commits 77c1927 and fa69a36, affecting the following files:

```
// contracts
compliance/ComplianceConfigurationService.sol
data-stores/TokenDataStore.sol
data-stores/TrustServiceDataStore.sol
service/IDSServiceConsumer.sol
token/DSToken.sol
token/IDSMintThrottle.sol
token/StandardToken.sol
trust/TrustService.sol
trust/IDSTrustService.sol

// deployment
tasks/deploy-timelocks.ts
tasks/setup-governance.ts
tasks/verify-governance.ts
```

7 Risk Classification

	Impact: High	**Impact: Medium**	**Impact: Low**
Likelihood: High	Critical	High	Medium
Likelihood: Medium	High	Medium	Low
Likelihood: Low	Medium	Low	Low

8 Protocol Summary

DSToken is a rebasing ERC-20 security-token system that coordinates investor registration, transfer restrictions, compliance rules and issuance through a registry of supporting services.

This engagement reviewed two additions: governance timelocks built on OpenZeppelin's `TimelockController`, and a mint throttle that limits issuance per time window, with a scheduled, cancellable path for mints above the cap.

9 Attestation

Cyfrin attests that it performed a security review of the DSToken Timelocks code provided by Securitize.

The repositories, commits, review period and findings with their final status are in the Summary and Issues Found tables in Section 5, and the in-scope files in Section 6. This attestation is limited to the documented scope, audited commits and mitigations specifically reviewed by Cyfrin.

Cyfrin publishes this document and its SHA-256 hash at https://github.com/Cyfrin/cyfrin-audit-reports. To check a copy on macOS or Linux, run the following in the folder that contains it; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name. Before running it, check that the URL is Cyfrin's repository.

```
U=https://github.com/Cyfrin/cyfrin-audit-reports/raw/main/reports/sha256
N=2026-09-07-cyfrin-securitize-evm-dstoken-timelocks-v2.0.pdf
F=$N
H=$(curl -fsSL $U/$N.sha256 | cut -d' ' -f1)
echo "$H *$F" | shasum -a 256 -c
```

Cyfrin's full audit report with all findings provided to Securitize has the SHA-256 hash and file name below. To check a copy of it, first check this document as above, then run the following in the folder that contains the full report; it prints `OK` when the copy matches. If the copy was renamed, set F to its file name.

```
H=5e7cca4480205b9319d5e0f9a38ea71822dda94dd9b39dee0c14c5186283b9c3
F=2026-09-07-cyfrin-securitize-evm-dstoken-timelocks-v2.0-full.pdf
echo "$H *$F" | shasum -a 256 -c
```

On Linux, `sha256sum -c` can be used in place of `shasum -a 256 -c`. On Windows, run `Get-FileHash <file> -Algorithm SHA256` in PowerShell and compare the result with the hash.
