

Highway Security Reviews

Attestation of Scope and Final Remediation Status | v2.1 package | Prepared September 29, 2026

Cyfrin attests that it performed manual security reviews of Highway's EVM, Substrate, and Solana/SVM implementations. The reviews applied to the repositories, commits, and periods below.

Implementation	Audited repository	Audited commit	Review period
EVM	Project-Highway/hway-ethereum	73def9a5bdc5a82aae6e5f691db4d7fd2b5c6198	June 8-26, 2026
Substrate	Project-Highway/hway-substrate	df99567ea9084d5dcf7e6eee3ab6cb3478c3c160	June 29-July 17, 2026
Solana/SVM	Project-Highway/hway-solana	b8246bbd6d6866b31d539e565700815188150541	July 20-31, 2026

Scope

The reviews covered the on-chain components responsible for message emission and execution, committee and relayer management, token custody, replay protection, payload handling, message encoding, cryptographic verification, delegation/backing, proxies, and access control, as applicable to each implementation. Exact file scope and limitations are stated in each report.

Findings and remediation status

Severity	Total	Resolved	Partially resolved	Acknowledged
Critical	2	2	0	0
High	2	2	0	0
Medium	15	9	0	6
Low	90	65	1	24
Informational	46	37	0	9
Gas optimization	6	6	0	0
Total	161	121	1	39

All Critical and High findings are resolved. The partially resolved item is Substrate L-30. Acknowledged records Highway's decision to retain a behavior or accept residual risk; it does not mean Cyfrin verified a code-level resolution or endorsed that decision. Finding-level status, rationale, conditions, and verification evidence in the corresponding report are controlling.

This attestation is limited to the documented scope, audited commits, and mitigations specifically reviewed by Cyfrin. It is not a warranty, product endorsement, or verification of any live deployment, production configuration, out-of-scope component, or later code revision.
